AWS Console Walkthrough – Phase 1 Task 01

2026, May 21

EC2 Dashboard:

Launching Instance:

The screenshot shows the AWS Management Console EC2 Dashboard. The left sidebar contains navigation links for EC2 services. The main content area is divided into several sections:

- Resources:** A table showing the number of resources in the United States (N. Virginia) Region. The table has 3 columns: Resource type, Count, and Action link.
- Launch instance:** A section with a 'Launch instance' button and a 'Migrate a server' link. It includes a note: 'Note: Your instances will launch in the United States (N. Virginia) Region'.
- Service health:** A section showing the status of the EC2 service. It includes a 'AWS Health Dashboard' link and a status message: 'This service is operating normally.'.
- EC2 cost:** A section showing the cost of EC2 resources. It includes a 'Date range' of 'Past 6 months', a 'Region' of 'Global', and a 'Credits remaining' of '\$100 USD'.
- Account attributes:** A section showing account information, including the 'Default VPC' and 'Settings'.

Resource type	Count	Action link
Instances (running)	0	Launch instance
Dedicated Hosts	0	Launch instance
Key pairs	0	Launch instance
Security groups	1	Launch instance
Auto Scaling Groups	0	Launch instance
Elastic IPs	0	Launch instance
Load balancers	0	Launch instance
Snapshots	0	Launch instance
Capacity Reservations	0	Launch instance
Instances	0	Launch instance
Placement groups	0	Launch instance
Volumes	0	Launch instance

Modifying Instance, Stopped Instance:

The screenshot shows the AWS Management Console EC2 Instances page. The left sidebar contains navigation links for EC2 services. The main content area is divided into several sections:

- Instances (1):** A section showing the status of the EC2 instances. It includes a 'Connect' button, an 'Instance state' dropdown, and an 'Actions' dropdown. The 'Launch instances' button is also visible.
- Filtering and Search:** A section with a 'Saved filter sets' dropdown and a search bar: 'Find Instance by attribute or tag (case-sensitive)'.
- Instance List:** A table showing the details of the instances. The table has 8 columns: Name, Instance ID, Instance state, Instance type, Status check, Availability Zone, and Public IPv4 DNS.
- Select an instance:** A dropdown menu to select an instance for modification.

Name	Instance ID	Instance state	Instance type	Status check	Availability Zone	Public IPv4 DNS
AI_AWS_Training	i-0102192202fbc569b	Stopped	t3.micro	-	us-east-1a	-

EC2 > Instances > i-0102192202fbc569b > Change instance type

You can change the instance type only if the current instance type and the instance type that you want are compatible.

Instance ID

i-0102192202fbc569b (AI_AWS_Training)

Current instance type

t3.micro

New instance type

Q t3.micro X

Change instance type to: t3.micro

c7i-flex.large

m7i-flex.large

t3.micro

t3.small

(32-bit) / (64-bit) architecture can be chosen.

this instance type

	t3.micro
On-Demand Linux pricing	0.0104 USD per Hour
On-Demand Windows pricing	0.0196 USD per Hour
vCPUs	2 (1 core)
Memory (MiB)	1024
Storage (GB)	-
Supported root device types	ebs
Network performance	Up to 5 Gigabit
Architecture	x86_64

S3:

Create Bucket

Upload file

Retrieving file

The screenshot shows the AWS S3 console interface. On the left, the navigation pane lists 'Amazon S3' with sub-sections for Buckets, Files, Access management and security, and Storage management and insights. The main content area displays the 'hello' object in the 'saveena-training-bucket-2026' bucket. The 'Object overview' section shows the following details:

- Owner:** d675892381c44d1a969436174d07332a3843524c25e048698f091cbd4b589c0e
- AWS Region:** US East (N. Virginia) us-east-1
- Last modified:** May 21, 2026, 17:01:08 (UTC-04:00)
- Size:** 3.0 B
- Type:** Key
- Key:** hello
- S3 URI:** s3://saveena-training-bucket-2026/hello
- Amazon Resource Name (ARN):** arn:aws:s3:::saveena-training-bucket-2026/hello
- Entity tag (Etag):** fdf7d989f78dce231a16929862509b9b
- Object URL:** https://saveena-training-bucket-2026.s3.us-east-1.amazonaws.com/hello

Below the overview, the 'Object management overview' section provides information about bucket properties and management configurations. The 'Bucket properties' section includes 'Bucket Versioning' and 'Replication status'. The 'Management configurations' section includes 'Replication status'.

Lambda:

Write and Invoke Hello World

The screenshot shows the AWS Lambda console interface. The main content area displays the 'hello-world-function' in the 'saveena-training-bucket-2026' bucket. The 'lambda_function.py' file is open, showing the following code:

```
1 import json
2
3 def lambda_handler(event, context):
4     # TODO implement
5     return {
6         'statusCode': 200,
7         'body': json.dumps('Hello World')}
8
9
```

The 'Event Name' field is set to 'test-event'. The 'Invocation type' is set to 'Synchronous'. The 'Event sharing settings' are set to 'Private'. The 'Execution Results' section shows the following response:

```
{
  "statusCode": 200,
  "body": "\"Hello World :)\r\n\""
}
```

The 'Test Events' section shows a list of test events, including 'test-event'.

ECS:

Function Summary:

Amazon ECS (Elastic Container Service) is an AWS service that runs and manages containers automatically. It has three layers: Capacity (where containers run), Controller (manages the containers), and Provisioning (the tools to control everything).

A Task Definition is the blueprint that tells ECS how to run a container, including what image to use, how much CPU and memory it needs. A Cluster is the infrastructure everything runs on, and a Service keeps an application running continuously.

ECS supports running containers on EC2, serverless via Fargate, or on your own servers, making it flexible for different use cases.
