

Anthropic API Call Script:

```
1 # Saveena Boga
2
3 import anthropic
4
5 client = anthropic.Anthropic(api_key="your-api-key-here")
6
7 message = client.messages.create(
8     model="claude-sonnet-4-6",
9     max_tokens=1024,
10    system="You are a helpful assistant.",
11    messages=[
12        {"role": "user", "content": "Hello, what is an AI agent?"}
13    ]
14 )
15 print(message.content[0].text)
```

Running:

```
(venv) saveenaboga@Saveenas-Air task2-ai-agent % python3 venv/api_call.py
# What is an AI Agent?

An AI agent is a system or program that can perceive its environment, make decisions, and take actions to achieve specific goals – often with some degree of autonomy.

## Key Characteristics

- Perception – It takes in information (text, data, sensors, etc.)
- Reasoning/Decision-making – It processes information to decide what to do
- Action – It executes tasks or produces outputs
- Goal-oriented – It works toward completing an objective
- Autonomy – It can operate with minimal human intervention

## How It Differs from a Simple AI Model

| Feature               | Basic AI Model | AI Agent |
|-----------------------|----------------|----------|
| Takes actions         | ✗              | ✓        |
| Uses tools            | ✗              | ✓        |
| Multi-step reasoning  | Limited        | ✓        |
| Operates autonomously | ✗              | ✓        |

## Common Examples

- ChatGPT with tools – browsing the web, running code
- AutoGPT / LangChain agents – completing multi-step tasks
- Virtual assistants – like Siri or Alexa
- Robotic systems – self-driving cars

## In Simple Terms

> An AI agent is like an AI that can think, plan, and act – not just answer questions.

Would you like to know more about a specific type of AI agent?
